

## New high resolution camera for ZRM 6014

The high resolution camera takes top quality pictures of the measured road marking - the built-in zoom allows detailed inspection of the marking, so the embedding of the glass beads can be checked easily without the need to crouch down on the road with a magnifying glass.

In zoom mode a true scale is displayed, so the size of the embedded glass beads can be determined.

The picture is stored together with the measuring value, so it can be used as a direct reference.

Of course the picture will also be downloaded to the free versatile mapping and data analysis software "MappingTools".

As always you can find more details about the ZRM 6014 and our other products at [www.zehntner.com](http://www.zehntner.com)
